PROJECT PROFILE:

Title : HOSTEL MANAGEMENT SYSTEM.

Description : We can create the graphical user interface (GUI) of the hostel management system using java's GUI frameworks such as JFrame and using database management system (DBMS) like MYSQL to store and retrieve Data related to hostels, rooms, bookings & other relevant information. Here JDBC (java database connectivity) can be used to establish a connection between Java and database.

Title : SMS SPAM DETECTION.

Description : This project aims to detect SMS spam using machine learning techniques we have used python for implementing machine learning algorithms due to its extensive libraries & frameworks, such As Scikit-learn, tensor flow & keras.

Title : FOOD FOR ALL (NGO based project)

Description : Developed a MERN application and used the Tailwind CSS for the designing the website. Making responsible using the tailwind parts. The main concept of developing this application that the food will never waste when the user have access to this website. People can donate the food and NGO's can also have access to see who is available to give the food and full fill the needs.

Title : WEBSITE OF VILLAGE

Description : The website is developed to give insights of the village including past history of village the new projects which are incorporated for the wellbeing of the village. For this we have used the HTML CSS and JavaScript. For the responsiveness the Bootstrap5 is used.
